CITY OF JOPLIN

On Call Infrastructure and Utility Cuts 2021

Questions and Answers Received by 3/3/2021

1. I saw where there is a provision for a 5% Mobilization fee if approved by the engineer. Can you give me an example of when that would be approved or what the criteria might be?

    a. When approved by the engineer, the 5% Mobilization fee would be available exclusively for the On-Call Infrastructure repair/replacement work of the contract. It is City staff's intent to accumulate enough infrastructure repair/replacement work so that the value of the work to be done by the contractor is worthwhile. Mobilization shall be considered on a case by case basis upon request of the contractor. **No additional mobilization fees will be granted without prior approval from the engineer**. **No mobilization will be paid for utility cuts pavement restoration**.

2. In the RCP bid items I have concerns about a lot of this being in the street which will require full depth rock replacement. Can you maybe add a line item for the extra rock if it is in the roadway? Or something to address this? For example, A 36 "RCP across the roadway would take a lot more rock than a storm line in the dirt. Could this be handled under the force accountant?

    a. For the purposes of this contract the contractor may, at their discretion, elect to bid the RCP bid items as though they will require full depth rock replacement regardless of the terrain in which the item is to be installed (i.e under the road or

under dirt surface) to account for these scenarios. **No additional payment will be made without Engineer's prior approval.**

3. Can you tell me under the current contract for the utility cuts if you have had any change orders? If so roughly the dollar value and what they were for?

    a. No change orders of any significance have been executed to date. Current change orders were for items not included in the current contract. These bid items have been incorporated into this contract.
